PROFESSIONAL SUMMARY

Information Systems undergraduate with hands on experience delivering full-stack systems for real clients, leading Agile Scrum teams, and translating business requirements into working software. Served as Scrum Master on a 14 week client project, managing sprint planning, backlog prioritisation, and on-time delivery. Skilled in business process analysis, requirements documentation, and building data-driven dashboards using Power BI and Python. Seeking an internship in Business Analysis or Project Management where structured thinking and technical depth can drive measurable outcomes.

SKILLS

Analysis	Requirements Gathering • Business Process Analysis • Stakeholder Communication • Gap Analysis • Data Analysis
Project	Agile Scrum • Sprint Planning • Backlog Management • SDLC • Risk Identification • Documentation
Technical	SQL • Python • Power BI • REST APIs • Spring Boot • React • MySQL • Git
Tools	Jira • Trello • GitHub • Swagger UI • Chart.js • Power BI

EDUCATION

BSc (Hons) Information Technology - Information Systems Engineering Oct 2024 - Jun 2028
Sri Lanka Institute of Information Technology, Malabe

PROJECTS

Prime Medical - Doctor Appointment & Patient Management System Jan 2026 - Apr 2025
Scrum Master & Full-Stack Developer | Real-Client Project | Team of [6] | 14 Week SDLC

- Led the full Agile Scrum lifecycle for a six-role healthcare management platform built for a live single-doctor clinic, covering sprint planning, backlog management, daily stand-ups, and on-time delivery across a structured 14 week cycle.
- Owned end-to-end development of the Appointment Management module, implementing real-time booking, rescheduling logic, and automated patient reminders via email and SMS notifications.
- Architected and built backend REST APIs using Spring Boot (Java 17) with JWT-based role authentication supporting six distinct user roles: Doctor, Receptionist, Pharmacist, Nurse, Admin, and Patient.
- Integrated an Electronic Health Records module with complete patient history tracking and a digital e-Prescription system, replacing paper-based records for the client clinic.
- Contributed to frontend development in React (Vite), system integration, and a pharmacy inventory module with automated low-stock alerts, reducing manual stock monitoring for clinic staff.

Smart Business Intelligence and Decision Support System

Mar 2026

Business Analyst & Developer | Solo Project

- Designed and deployed a full-stack business intelligence web application integrating real-time dashboards, trend analysis, and predictive forecasting, enabling non-technical users to interpret performance data without manual reporting.
- Conducted requirements analysis to map business objectives to technical specifications, producing a structured feature set that guided the full development cycle from brief to live deployment.
- Built interactive data visualisation dashboards using Python, SQL, and Chart.js, consolidating multiple data sources into a single decision-support interface.
- Live demo: https://smart-bi-system.onrender.com

Telco Customer Churn Analysis

Dec 2025 - Jan 2026

Data Analyst | Solo Project

- Analysed 7,000+ customer records in Power BI to identify the primary behavioural and contractual drivers behind a 26.54% churn rate, isolating contract type, payment method, and service usage as the highest-impact variables.
- Developed segmented interactive dashboards that mapped risk profiles by customer cohort, providing a structured evidence base for targeted retention decisions.
- Produced a findings report translating raw churn data into prioritized retention recommendations focused on reducing revenue attrition among month-to-month contract holders.

FitVital Hub - Fitness Centre Management System

Jul 2025 - Oct 2025

Full-Stack Developer | Academic Project

- Architected a role-based fitness management platform using Spring Boot and MySQL, supporting distinct operational workflows for clients, trainers, and administrators across four functional modules: appointments, payments, reporting, and feedback.
- Applied MVC architecture to enforce separation of concerns across the codebase, reducing coupling between components and improving long-term maintainability.
- Conducted requirement definition sessions to document user workflows and translate functional needs into structured system specifications prior to development.

Tutor Management System

Feb 2025 - May 2025

Full-Stack Developer | Academic Project

- Built a full-stack tutor matching platform using Spring Boot and Tailwind CSS, enabling students to search, filter by subject, and connect with verified tutors through a structured registration and profile system.
- Conducted requirement analysis to map end-user interaction flows and define feature scope, producing documentation that guided development from initial specification through to delivery.
- Structured the application using MVC architecture, separating business logic from presentation to improve code readability and reduce maintenance complexity across the project lifecycle.
